

Waterhouse, (B) & Fanshaw's
Kinepock inoculation and
Rules to be attended to during
vaccination.

McClark

Dr Billings desired these to be
stitched in this style for the power
will bind at some future time

Nov 8/77.

George W. Clark

KINE POCK INOCULATION.

Rules to be attended to during the Vaccination.

74648

1. THE diet to be the same as before vaccination.
2. Scratching or rubbing the arm, or shoving up the sleeve should be avoided as much as possible.
3. In case an itching sensation of the vaccinated part should give the patient uneasiness, a little vinegar applied to the part will give immediate relief.
4. No matter to be transferred from the person inoculated to another person. Taking it from another often becomes a snare to individuals, and the source of spurious matter. But even those, who by chance have had the genuine disease in that way, have no certainty of it—and who would wish to have it upon uncertainties ?
5. Women, who do house work, should avoid washing and baking on the 7th and 8th days, the usual time for the symptoms.
6. No danger of washing the hands and face in cold water during the disease.
7. Women may without hesitation receive the Kine Pock in all circumstances without exception, at home or travelling by land or water.
8. No danger of vaccinating children at the period of teething.
9. Labouring men and mechanics need not abstain from their customary employment, provided their indisposition does not require it.
10. Children should never be lifted by the arms,* especially when under the inoculation. The arm should not be bound up, nor confined in tight sleeves.

OBSERVATIONS.

1. It occasions no other disease. On the contrary, it has often been known to improve health ; and to remedy those diseases, under which the patient before laboured.

2. It leaves behind no blemish, but a *blessing* ;—one of the greatest ever bestowed on man ;—*a perfect security against the future infection of the small-pox.*

N. B. Save the scab for examination.

B. WATERHOUSE.

* No prudent person, who is aware of the tenderness of the bone of a young child, would ever lift one by its arms, or lead a child a mile by one arm.

27 Dudley St.
Boston Nov. 7th 1777

Dr. J. Bellings V.S.A.

Nov. 8th Dear Sir,

Some time since
I sent you from the Library, a copy
of "Watshouse or the Hoppy
Cask" and stated my opinion
that a note in ms. at the
end was a misquotation
inscription on title page
in the Autograph of B.W.
I have since had free
access to the papers of B.W.
and now know that it is
Watshouse was correct. Dr. Minim
was a "Doctor" practicing in
Cambridge in the same
neighborhood. I enclose you
two rebs of Watshouse - a
hand-bill or notice from him
of a set of rules given to
patients who were vaccinated
by Pyleus Fancher; the doctor
recounts of Watshouse - I
hope you will like them

in view of the country
existing I am in no position
& am writing a brief general
sketch of Wallabout for
improvement - Is there any
thing in your library that
would help me in this
work? - I am anxious to
get a good engraved
lens of P. V. to have
it heliotyped - Have you
one? - I have seen two -
from different dealers but
neither are good enough
of I can get better -
& will hear you on
mine and, whenever I
come across anything &
wherever it is I will
know of it

Friendly
John Morris
